1.Project Overview

Built an interactive analytics stack for a grocery floral department to monitor **Units, Sales, Cost, Shrink, Waste %**, promo uplift, and **holiday windows** (Valentine's, Mother's Day, Thanksgiving, Christmas).
Outputs include a Python EDA notebook, a set of reusable SQL views, and a **Power BI dashboard** with date/holiday, category, and SKU slicers.

2. Dataset Summary

- **Grain:** daily by SKU
- **Span:** Jan-2024 → Dec-2025 (two retail years)
- **Rows / Cols:** ~3.6K–4K rows per SKU (daily) • ~15–20 fields
- **Key fields:**
  - date, year_week, sku, category
  - price, cost
  - on_hand_beg, delivery_qty, sales_qty, markdown_qty, waste_qty
  - promo_flag, holiday_flag, is_holiday_window_v2
  - weather_index (context signal)
- **Derived tables:** DimDate (marked as date table), DimSKU (category, lifecycle), and a **baseline units (6w)** measure for demand vs. holiday spikes.

3) Exploratory Data Analysis (Python)

Environment: pandas, numpy, matplotlib; CSV → parquet; reproducible notebook.
Steps

- **Load & health checks:** df.info(), null scan, duplicate scan; typed dates; verified positive quantities.

```
[3]: df.info()

<class 'pandas.core.frame.DataFrame'>
RangeIndex: 1826 entries, 0 to 1825
Data columns (total 13 columns):
 #   Column         Non-Null Count  Dtype
---  ------         --------------  -----
 0   date           1826 non-null   object
 1   sku            1821 non-null   object
 2   category       1821 non-null   object
 3   price          1826 non-null   float64
 4   cost           1819 non-null   float64
 5   on_hand_beg    1826 non-null   int64
 6   delivery_qty   1826 non-null   int64
 7   sales_qty      1826 non-null   int64

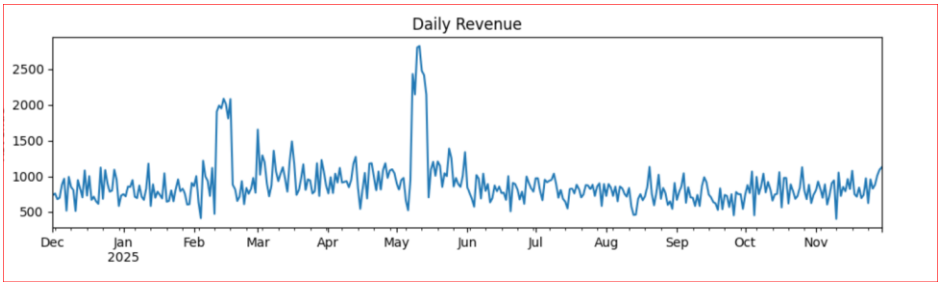
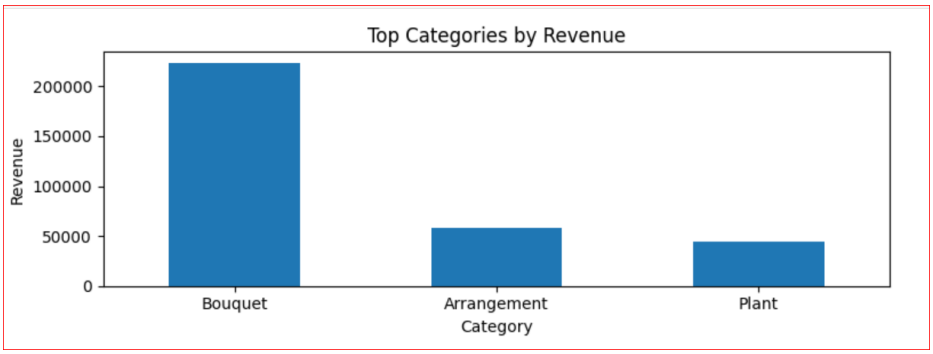
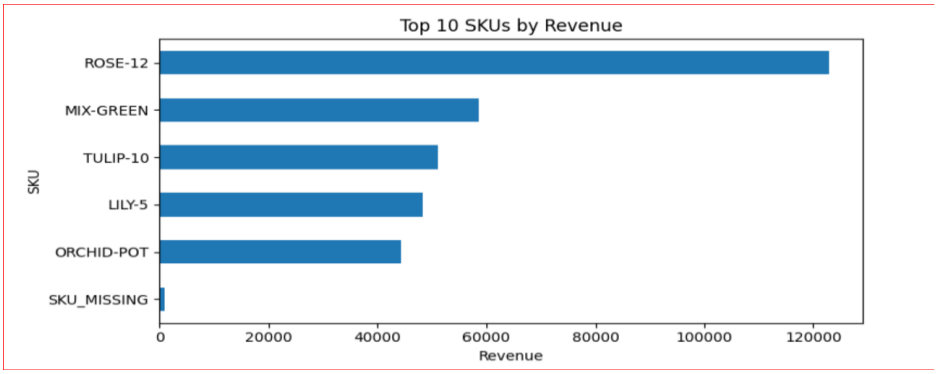
- **Cleaning:** clipped negative/erroneous quantities, harmonized SKUs/categories, forward-filled missing price/cost within SKU.
- **Feature engineering:**
  - waste_rate = waste_qty / (sales_qty + waste_qty)
  - gm$ = (price - cost) * sales_qty, gm% = gm$ / (price * sales_qty)
  - is_promo as union of file flag + holiday window
  - year_week, week_iso, is_weekend
  -
- **Quik EDA:**







- **EDA highlights:**
    - **Holiday uplift:** Units spike 5–10× in holiday windows; pricing lifts 2–2.5× on Valentine's/Mother's Day; waste% dips slightly post-holiday as inventory is cleared.
    - **Category mix:** Bouquets dominate sales and share of waste $; Plants carry higher unit margin but lower turnover.
    - **Price-volume curve:** elastic outside holidays; largely **inelastic** during event weeks.

4. Data Analysis using SQL

We performed structured analysis in PostgreSQL to answer key business questions.

1) Total revenue, total units, and total gross margin

Data Output | Messages | Notifications

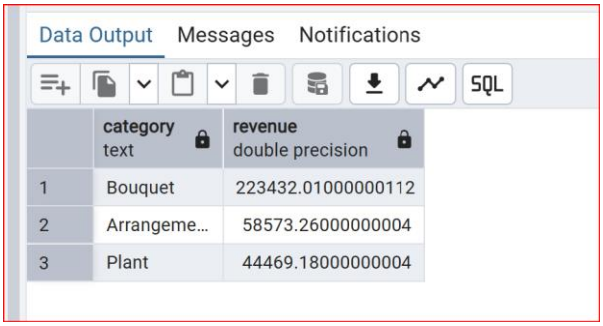
	total_revenue double precision	total_units numeric	total_gross_margin double precision	gm_pct numeric
1	326474.45000000024	13957	191012.45000000077	58.51

2) Daily revenue trend over time

Data Output | Messages | Notifications

	dt date	daily_revenue double precision
1	2024-12-01	729.67
2	2024-12-02	754.7
3	2024-12-03	674.6999999999999
4	2024-12-04	694.7
5	2024-12-05	884.62
6	2024-12-06	969.6
7	2024-12-07	514.78
8	2024-12-08	994.5699999999999
9	2024-12-09	854.64
10	2024-12-10	809.6600000000001
11	2024-12-11	509.76

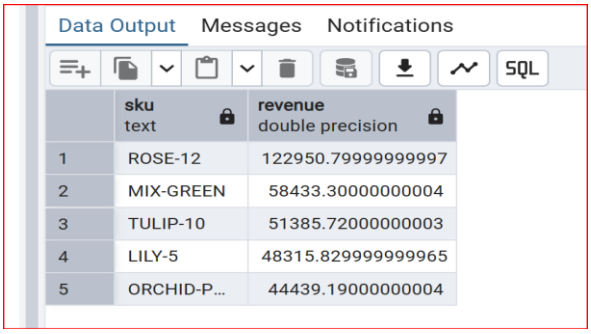
3) **Categories ranked by total revenue**



Data Output | Messages | Notifications

	category text	revenue double precision
1	Bouquet	223432.01000000112
2	Arrangeme...	58573.26000000004
3	Plant	44469.18000000004

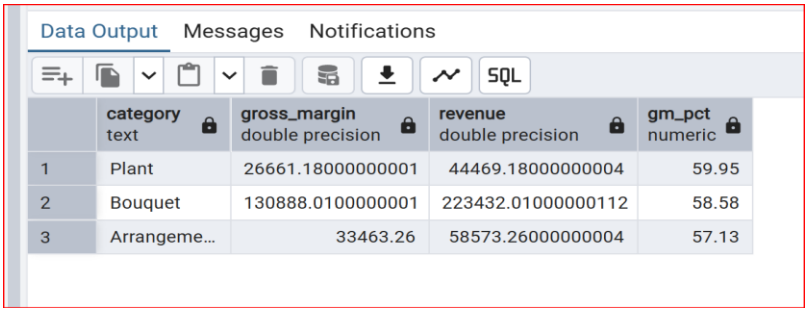
4) **Top 10 SKUs by revenue**



Data Output | Messages | Notifications

	sku text	revenue double precision
1	ROSE-12	122950.79999999997
2	MIX-GREEN	58433.30000000004
3	TULIP-10	51385.72000000003
4	LILY-5	48315.829999999965
5	ORCHID-P...	44439.19000000004

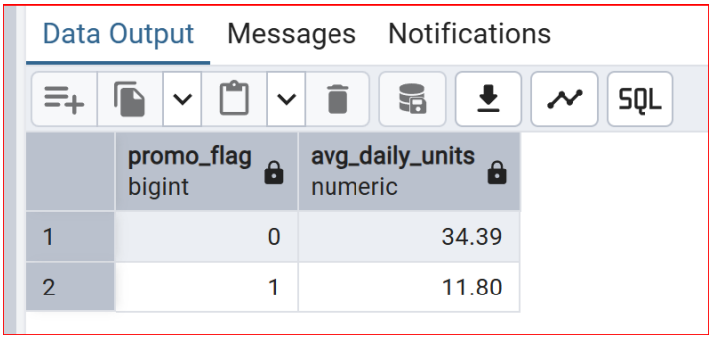
5) **Gross-margin % by category**



Data Output | Messages | Notifications

	category text	gross_margin double precision	revenue double precision	gm_pct numeric
1	Plant	26661.18000000001	44469.18000000004	59.95
2	Bouquet	130888.0100000001	223432.01000000112	58.58
3	Arrangeme...	33463.26	58573.26000000004	57.13

6) **Avg daily units on promo vs not**

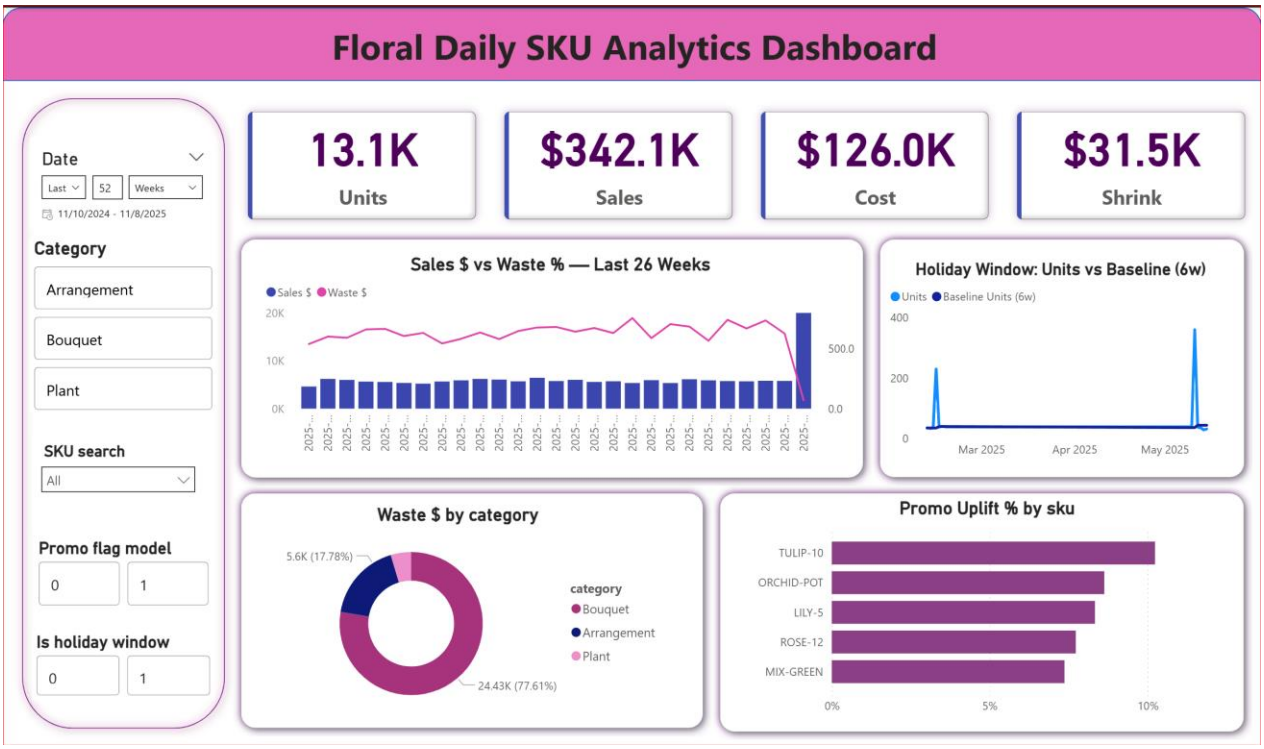


Data Output | Messages | Notifications

	promo_flag bigint	avg_daily_units numeric
1	0	34.39
2	1	11.80

5.Dashboard in Power BI

Floral Daily SKU Analytics Dashboard



6.Business Recommendations & Actions

- Plan early for holidays: raise orders and price 2–2.5× in Valentine's/Mother's Day windows; hold a post-event markdown rule to protect margin.

- Focus waste control on Bouquets: largest share of Waste $—pilot tighter delivery cadence and end-of-day markdowns.

- Promo targeting: keep offers on top uplift SKUs (e.g., TULIP-10, ORCHID-POT) and avoid deep discounts where demand is already inelastic.

- Run-the-business views: Weekly ops should use *Sales vs Waste%* and *Holiday Window* charts plus the SKU search slicer for quick interventions.
